

VIRTUAL TECHNICAL CONFERENCE PLATFORM

SRN: PES1UG24CS551

Date: 25th Aug 2026

NAME: Abhay Dubey H

USE-CASE FLOW:

Use Case Name	Generate Multi-Track Schedule
Actor	Track Chair (primary), Reviewer (indirectly affected via session assignments)
Preconditions	- Track Chair is authenticated and holds scheduling privileges on the platform. - All papers intended for the conference have completed the review process and are marked "Accepted." - Presentation durations, speaker availability windows, and virtual track room capacities have been entered into the system.
Postconditions	- A conflict-free multi-track schedule is generated, approved, and published on the conference platform. - All accepted papers are assigned a track, time slot, and virtual room with no overlapping speaker or room-capacity conflicts. - Registered attendees are notified of the finalized schedule.
Main Success Scenario	- Track Chair initiates automated schedule generator for the upcoming technical conference tracks. - System retrieves updated paper submissions, assigned presentation durations, and available virtual track rooms/time slots. - System runs an optimization algorithm to auto-assign papers to parallel tracks, checking for topic alignment and speaker schedule conflicts. - System presents the draft multi-track schedule layout to the Track Chair. - Track Chair reviews the layout and approves the final schedule. - System publishes the multi-track schedule to the conference platform and notifies registered attendees.
Alternate Flow	3a. Schedule/Track Conflict Detected: - System alerts the Track Chair of overlapping presentation slots for a speaker or room capacity limits. - System highlights conflict areas and prompts manual resolution or re-optimization. - Track Chair manually adjusts the time slot or re-assigns the paper to a different track before publishing.
