

VIRTUAL TECHNICAL CONFERENCE PLATFORM

SRN: PES1UG24CS551

Date: 25th Aug 2026

NAME: Abhay Dubey H

REQUIREMENTS TABLE:

Requirement ID	Type	Description	Priority	Acceptance Criteria	Rationale(Short)	Comments
FR-001	Functional	The system shall anonymize submitted manuscripts (strip author headers and metadata) before assigning them to reviewer pools for double-blind review.	High	Pass: Reviewer sees anonymized paper; Fail: Author identity visible to peer reviewer.	Ensures fair and unbiased evaluation during peer review.	Clarify if PDF metadata stripping is handled automatically on upload.
FR-002	Functional	Allow Authors to submit papers and track review status	High	Pass: Author succesfully uploads paper and status changed to "Under review". Fail: File rejected with invalid file extension or status fails to update.	Core portal feature for author submission tracking.	Specify maximum allowed file size for PDF uploads.
FR-003	Functional	Allow Track Chairs to generate conflict-free multi-track presentation schedules.	High	Pass: Schedule generated without overlapping speaker schedules or room capacity violations; Fail: Speaker double booked across tracks.	Necessary for conflict-free conference timetable management.	Specify constraint input format before schedule generation.
FR-004	Functional	Allow attendees to submit and upvote questions during live presentation sessions.	Medium	Pass: Questions rank dynamically based on number of upvotes given. Fail: Upvote count does not count or fails to render.	Prioritizes high-interest audience questions during Q&A sessions.	Add explicit rate limiting to prevent upvote spamming.
FR-005	Functional	Allow reviewers to submit scores and feedback for assigned papers.	High	Pass: Review score and text saved to paper record. Fail: Form submits incomplete data or assigns review to wrong paper.	Enables selection of accepted papers based on reviewer scoring.	Define mandatory fields (e.g., score out of 10, comments).
NFR-001	Non-Functional	The multi-track schedule generator shall resolve session room capacities and speaker availability constraints in under 10 seconds.	High	Pass: Benchmarking tests confirm target latency(<10s) and security standards under simulated peak load. Fail: Execution exceeds 10s.	Maintains platform responsiveness during administrative scheduling tasks.	Test performance with a minimum benchmark of 50 concurrent tracks.
NFR-002	Non-Functional	The system shall encrypt all submitted stored papers and reviewer feedback at rest using AES-256	High	Pass: Database audit log confirms AES-256 encryption on file storage; Fail: Unencrypted paper files accessible via direct link.	Protects intellectual property and preserves double-blind confidentiality.	Verify key management policies for database access control.
